

Data Centre Site Access & Delivery Visibility

A centralised platform to manage contractor access, visitor movement, vehicle entry, delivery slots and operational reporting for data centre environments.

THE PROBLEM

Data centre project and operations teams manage multiple contractors, vendors, visitors and delivery movements every day. When access records, guard house updates and delivery schedules are handled manually, teams may face limited visibility, delays and inconsistent reporting.

THE SOLUTION

V-Watch Ai brings site access and delivery workflows into one digital platform, helping security, project, facility and operations teams track people, vehicles and deliveries more effectively.

KEY CAPABILITIES

Digital Site Access

- ✓ Contractor, worker, visitor and vendor registration
- ✓ Facial recognition, QR or RFID-based access
- ✓ Safety pass and profile validity tracking
- ✓ Access approval and restriction controls
- ✓ Real-time headcount visibility
- ✓ Entry and exit logs

Delivery Management

- ✓ Delivery slot booking
- ✓ Vehicle and driver registration
- ✓ Guard house check-in
- ✓ Early, late and unplanned delivery handling
- ✓ Delivery status tracking
- ✓ Site movement visibility

BUILT FOR

Data centre construction

Data centre operations

Facility management
